## Calculus I - MAC 2311 - Section 003

## **Quiz 1** 08/29/2018

**Instructions:** The total number of points of this quiz is 10. You will get an extra point if you solve correctly the last exercise.

1) [5 points] The graph of a function f is given.

State the value of each quantity. If a quantity does not exist or is undefined  $\mathbf{explain}$   $\mathbf{why}$ .

a) 
$$\lim_{x \to -2^{-}} f(x) =$$

b) 
$$\lim_{x \to -2^+} f(x) =$$

c) 
$$\lim_{x \to -2} f(x) =$$

d) 
$$f(-2) =$$

e) 
$$\lim_{x \to 0^-} f(x) =$$

$$f) \lim_{x \to 0^+} f(x) =$$

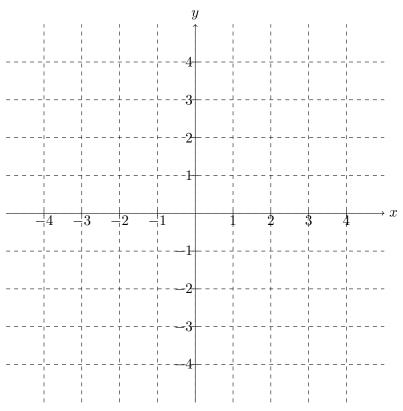

g) 
$$\lim_{x \to 0} f(x) =$$

h) 
$$f(0) =$$

2) [5 points] Sketch the graph of a function f that satisfies all of the given conditions:

$$\lim_{x \to -1^{-}} f(x) = 1, \qquad f(-1) = -1, \qquad \lim_{x \to -1^{+}} f(x) = -1,$$
$$\lim_{x \to 2} f(x) = 2, \qquad f(2) = 0.$$

Make sure that your graph is the graph of a function, i.e. it passes the vertical line test.

3) [1 point] A student says:

"If f is a function such that 
$$\lim_{x\to 3} f(x) = 1$$
 then  $f(3) = 1$ ."

Do you agree or disagree? If you agree explain why, otherwise show (algebraically or visually with a graph) a **counterexample**, i.e. an example of function such that  $\lim_{x\to 3} f(x) = 1$  and  $f(3) \neq 1$ .
